Make the most of your practice with 3Shape dental solutions

New motion capture and treatment simulation applications enable professionals to do more with their digital dentistry

Copenhagen, November 21, 2017 – Since its beginning, digital dentistry has been thought of as a means for replacing analog workflows in the reconstruction of the dentition.

We believe differently.

At the Greater New York Dental Meeting 2017, 3Shape will introduce its solutions and workflows that are changing dentistry. Solutions that begin with digital scans and end with so much more.

What you'll see at GNYDM 2017 from 3Shape

3Shape TRIOS 3 Wireless - the freedom of wireless intraoral scanning

GNYDM 2017 attendees can demo hands-on, 3Shape TRIOS 3 Wireless – the world's first wireless intraoral scanner. 3Shape TRIOS 3 Wireless is the newest version of the five-time winner of the Cellerant "Best of Class" Award for intraoral scanners.

3Shape TRIOS 3 Wireless enables users to move freely throughout the practice because there's no connecting cable between the intraoral scanner wand and computer. 3Shape TRIOS 3 Wireless features the same speed, real-color and documented accuracy of all TRIOS scanners.

The TRIOS open ecosystem connects users to a wide selection of implant manufacturers, orthodontic solution providers like Invisalign, dental laboratories, and manufacturing systems and materials.

For more details, see <http://www.3shape.com/trios>

3Shape TRIOS Treatment Simulator – preview the orthodontic treatment for your patients

3Shape TRIOS Treatment Simulator is an exciting and engaging way to help drive patient treatment acceptance. The TRIOS Treatment Simulator shows patients the envisioned results of their orthodontic treatment. Patients see their current teeth alignment change into the ideal set-up, onscreen and in full color.

TRIOS Treatment Simulator is an open solution that can be used to simulate treatment with any of the 25+ orthodontic treatment providers TRIOS connects to, i.e., Invisalign, ClearCorrect as well as bracket-systems like Incognito and many more.

3Shape TRIOS Treatment Simulator is a free upgrade as part of CliniCare for all 3Shape TRIOS users.

3Shape TRIOS Patient Specific Motion – record your patient’s articulation

Using your 3Shape TRIOS intraoral scanner and the all new 3Shape TRIOS Patient Specific Motion tool, you can now scan and record your patient’s dynamic articulation.

Previously, it was possible to capture static occlusion and contact points to allow a virtual articulator to mimic and approximate the jaw movement. With the TRIOS Patient Specific Motion tool, you record a patient’s real articulation with your TRIOS. This enables technicians to adjust restorations and orthodontic treatments based on the recorded patient’s articulation.

3Shape TRIOS Patient Specific Motion is a free upgrade as part of CliniCare for all 3Shape TRIOS users.

About 3Shape

3Shape is changing dentistry together with dental professionals across the world by developing innovations that provide superior dental care for patients. Our portfolio of 3D scanners and CAD/CAM software solutions for the dental industry includes the multiple award-winning 3Shape TRIOS intraoral scanner, the upcoming 3Shape X1 CBCT scanner, and market leading scanning and design software solutions for dental labs.

Two graduate students founded 3Shape in Denmark’s capital in the year 2000. Today, 3Shape has over 1,000 employees serving customers in over 100 countries from an ever-growing number of 3Shape offices around the world. 3Shape’s products and innovations continue to challenge traditional methods, enabling dental professionals to treat more patients more effectively. www.3shape.com
